

Introducing the Eland SYS/2

The Eland Firewall/VPN SYS-2 is a network security appliance which offers an integrated and comprehensive solution to protect your network at the perimeter. With its built-in firewall, Anti-Spam and Anti-Virus protection, Web content filtering and Virtual Private Network, it offers you maximum security measures. The Eland Firewall/VPN SYS-2 is easy to deploy and use.

Licensing cost

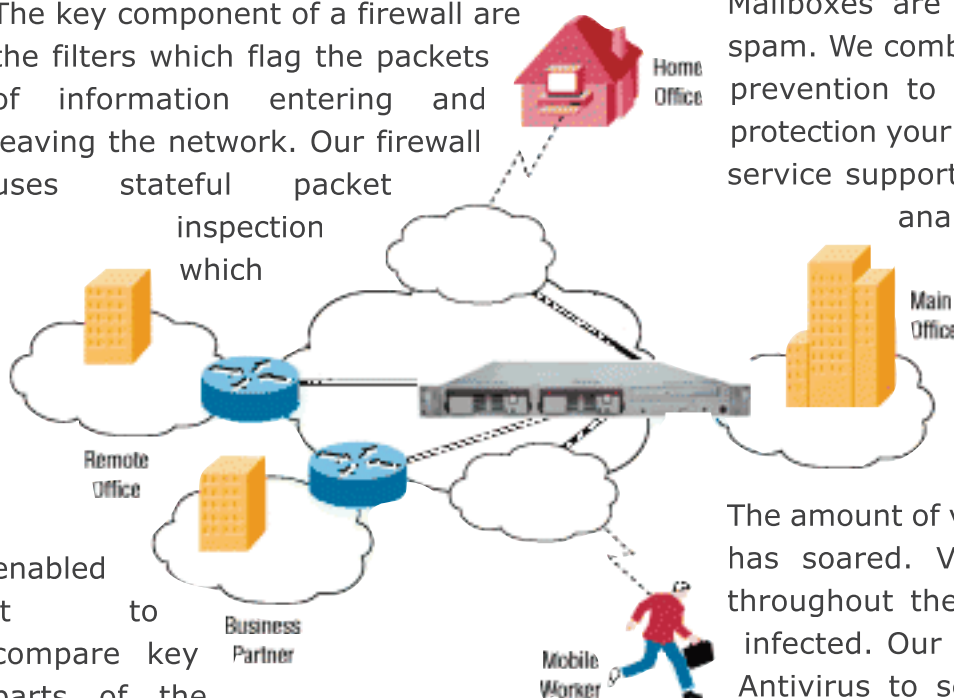

The Eland Firewall/VPN SYS-2 connects up to 250 computers. It comes without any per-user or per-connection license restrictions. This translates into an unlimited number of users without any additional cost.

Secure and reliable firewall

The key component of a firewall are the filters which flag the packets of information entering and leaving the network. Our firewall uses stateful packet

inspection which

enabled it to compare key parts of the

packets and the characteristics of the connection to determine whether the information is allowed through or not.

Protection against attacks

Windows computers are vulnerable to viruses, worms and other types of attacks; especially if the latest updates have not been installed. Our appliance protects these computers from such attacks.

Secure communication

If you just want to access data securely over the Internet, the Eland Firewall/VPN SYS-2 is the answer. It allows your users to access the corporate network over the Internet while providing a high level of privacy, security, performance and quality of service.

Comprehensive spam blocking

Mailboxes are clogged with junk because of spam. We combine several approaches to spam prevention to achieve the level of anti-spam protection your enterprise is after. Our Antispam service supports whitelists/blacklists, heuristic analysis and bayesian filtering. You can customize the sensitivity of these filtering techniques to suit your corporate needs.

Virus protection

The amount of viruses we receive through email has soared. Viruses can spread as wildfire throughout the enterprise once a machine is infected. Our appliance comes with a built-in Antivirus to scan all incoming and outgoing

emails. This mitigates the risk of infection and the embarrassment of viruses being sent to your business partners.

websites. You can block porn or violent sites and keep track of how web access is being used throughout your company.

Web proxying to speed up access

Access to web sites can slow down to a crawl as employees browse the web. Our Web proxy keeps a copy of frequently access web sites thereby reducing bandwidth usage and speeding up access. It uses a technique which makes it

Monitoring the appliance

The Eland Firewall/VPN SYS-2 provides extensive reporting facilities to allow the user to monitor what is happening in real time. You can view that status of the appliance at a glance.
